

BUILD A LUXURY WEDDING INVITE

Website · Animation · Live · Free

YOU WILL BUILD

- Envelope + Seal
- Hero Photo Slide
- Live Countdown
- 4 Event Slides
- Live on Internet

Rs.15,000 SAVED

Amount spent on building this: Rs. 0
Tools: React Vite Framer Motion Claude AI Canva Vercel

TOOLS USED:

- React
- Vite
- Framer Motion
- Claude AI
- Canva
- Vercel

WHAT'S INSIDE THIS GUIDE

01
Setup & Installation
npm + Vite + Framer Motion

02
Animations File
Shared reusable Framer variants

03
Envelope Component
Tap-to-open with your Canva design

04
Hero + Countdown
Photo layout + live timer hook

05
Event Slides
Mehendi, Haldi, Dinner, Wedding

06
Deploy to Vercel
Live link in 4 terminal commands

1 Create Your Project

Open Terminal. Run these 5 commands one by one:

```
npm create vite@latest wedding-invite -- --template react
cd wedding-invite
npm install
npm install framer-motion
npm run dev
```

2 Add Google Fonts

Paste at the very TOP of src/index.css — before everything else:

```
@import url('https://fonts.googleapis.com/css2?
family=Cormorant+Garamond:ital,wght@0,400;0,600;1,400&
family=EB+Garamond&family=Great+Vibes&display=swap');
```

3 CSS Variables + Mobile-First Root

Add to src/index.css — makes the invite look perfect on phones:

```
#root {
  max-width: 430px; /* iPhone 14 Pro Max width */
  margin: 0 auto;
  overflow-x: hidden;
}
:root {
  --gold: #c9942a;
  --cream: #fdf8f0;
  --text-dark: #1a0800;
  --text-medium: #4a2208;
}
```

4 Create These Files

Create each file inside your src/ and public/ folders:

```
src/components/EnvelopeIntro.jsx // Tap-to-open envelope
src/components/HeroSlide.jsx // Couple photo + names
src/components/CountdownSlide.jsx // Live countdown
src/components/EventSlide.jsx // Reusable ceremony slide
src/components/FinalSlide.jsx // Closing slide
src/animations.js // Shared Framer variants
public/couple.jpg // Your hero photo
public/couple2.jpg // Countdown background
public/envelope.png // Canva envelope design
```

IMPORTANT: Keep 'npm run dev' running in one terminal window at all times.

Open a NEW terminal window (Cmd+N) for all other commands like deploy.

5 src/animations.js — Create this file, paste exactly

Import these in every component for scroll animations:

```

export const fadeUp = {
  hidden: { opacity: 0, y: 40 },
  visible: { opacity: 1, y: 0,
    transition: { duration: 0.8, ease: [0.22, 1, 0.36, 1] } }
}
export const fadeLeft = {
  hidden: { opacity: 0, x: -50 },
  visible: { opacity: 1, x: 0,
    transition: { duration: 0.7, ease: [0.22, 1, 0.36, 1] } }
}
export const scaleIn = {
  hidden: { opacity: 0, scale: 0.85 },
  visible: { opacity: 1, scale: 1,
    transition: { duration: 0.5 } }
}
export const stagger = {
  hidden: {},
  visible: { transition: { staggerChildren: 0.12 } }
}

```

6 How to Animate Any Element on Scroll

Wrap any element — it animates in as the user scrolls to it:

```

<motion.div
  variants={fadeUp}
  initial='hidden'
  whileInView='visible'
  viewport={{ once: true, margin: '-80px' }} // ALWAYS add once:true
>
  Your content here
</motion.div>

```

7 EnvelopeIntro.jsx — Full Component Code

This is the tap-to-open envelope screen. Uses your /public/envelope.png:

```

import { motion } from 'framer-motion'
import { useState, useEffect } from 'react'

export default function EnvelopeIntro({ onComplete }) {
  const [opened, setOpened] = useState(false)
  useEffect(() => {
    if (sessionStorage.getItem('invited')) onComplete()
  }, [])
  const handleTap = () => {
    setOpened(true)
    setTimeout(() => {
      sessionStorage.setItem('invited', 'true')
      onComplete()
    }, 2000)
  }
  return (
    <div onClick={handleTap} style={{
      position:'fixed', inset:0, background:'#f5ece0',
      display:'flex', flexDirection:'column',
      alignItems:'center', justifyContent:'center', cursor:'pointer' }}>
      <motion.img src='/envelope.png'
        animate={opened ? { y:80, opacity:0 } : { y:[0,-8,0] }}

```

PART 04 // HERO SLIDE + COUNTDOWN

8 HeroSlide.jsx — Photo Background Layout

Full screen photo. PV logo at top. Names in frosted glass block at bottom.

```
<section style={{ position:'relative', height:'100svh' }}>
  {/* Background photo */}
  <img src='/couple.jpg' style={{
    position:'absolute', inset:0,
    width:'100%', height:'100%',
    objectFit:'cover',
    objectPosition:'center 10%' // keeps faces visible on mobile!
  }} />
  <div style={{ position:'relative', zIndex:2,
    display:'flex', flexDirection:'column', height:'100%' }}>
    {/* TOP — PV logo + subtitle */}
    <div style={{ padding:'36px 24px 0', textAlign:'center' }}>
      {/* Your PV logo circle and subtitle text */}
    </div>
    {/* SPACER — couple faces visible here */}
    <div style={{ flex:1, minHeight:'180px' }} />
    {/* BOTTOM — frosted glass block */}
    <div style={{
      background:'rgba(15,8,2,0.22)',
      backdropFilter:'blur(12px)',
      borderRadius:'16px',
      padding:'16px 24px 36px',
      margin:'0 12px', textAlign:'center' }}>
      {/* Bride Name --- and --- Groom Name --- Tagline */}
    </div>
  </div>
</section>
```

9 useCountdown.js — Live Timer Hook

Create src/hooks/useCountdown.js — updates every second:

```
import { useState, useEffect } from 'react'

export function useCountdown(targetDate) {
  const [time, setTime] = useState({})
  useEffect(() => {
    const interval = setInterval(() => {
      const diff = new Date(targetDate) - new Date()
      setTime({
        days: Math.floor(diff / 86400000),
        hours: Math.floor((diff % 86400000) / 3600000),
        minutes: Math.floor((diff % 3600000) / 60000),
        seconds: Math.floor((diff % 60000) / 1000)
      })
    }, 1000)
    return () => clearInterval(interval)
  }, [targetDate])
  return time
}

// Use it in CountdownSlide.jsx like this:
// const { days, hours, minutes, seconds } = useCountdown('2026-06-19')
```

10 Gold Shimmer Text Effect

Apply to couple names, headings. Creates a premium gold sheen:

```
// Wrap text in <motion.span> and apply:
style={{
```

11 EventSlide.jsx — One Component, 4 Ceremonies

Pass different props for Mehendi, Haldi, Haldi Dinner and Wedding:

```
// Use the same component for all 4 events, just change props:
<EventSlide
  label='THE FIRST HUES OF LOVE'
  heading='Mehendi'
  headingColor='#1e5c2a'      // Change per event – see table below
  description='Begin with henna, music and memories.'
  date='-- -- --'            // Replace with actual date
  time='--:-- PM onwards'    // Replace with actual time
  venue='Venue Name, City'   // Replace with actual venue
  dressCode='Boho'
  mapsUrl='https://maps.google.com/?q=your+venue+name'
/>
```

HEADING COLOUR PER EVENT:

EVENT	HEADING COLOUR	HEX CODE
Mehendi	Forest Green	#1e5c2a
Haldi Ceremony	Turmeric Gold	#7a4e00
Haldi Dinner	Deep Rose	#6b1e48
The Wedding	Antique Gold	#5a3200

12 Scroll Progress Bar — Add to App.jsx

Gold bar on right edge fills as user scrolls — premium touch:

```
import { useScroll, useSpring, motion } from 'framer-motion'

const { scrollYProgress } = useScroll()
const scaleY = useSpring(scrollYProgress, { stiffness:120, damping:30 })

// Add inside your App JSX return:
<motion.div style={{
  position:'fixed', right:0, top:0,
  width:'3px', height:'100vh',
  background:'linear-gradient(180deg, #c9942a, #f0d080)',
  transformOrigin:'top', scaleY, zIndex:9999
}} />
```

13 DEPLOY — 4 Commands, Free on Vercel

Open a NEW terminal window. Run these in your project folder:

```
npm run build           # Build for production (creates dist/ folder)
npm install -g vercel   # Install Vercel CLI
vercel login            # Login – check email, click the link sent
vercel --prod           # Deploy – press Enter for every question

# Done! Your invite is live at:
# https://your-names-wedding.vercel.app
```

SAVE BEFORE EVERY CHANGE: git init → git add . → git commit -m 'save'

Undo any mistake instantly with: git restore .

Use Cmd+Shift+F in VS Code to search your entire project. Replace each item below:

FIND IN CODE	REPLACE WITH
Bride's Name	First name of bride — displayed in Great Vibes font
Groom's Name	First name of groom — displayed in Great Vibes font
B & V on seal	Your initials — used in Canva wax seal design
'YYYY-MM-DD'	Your date e.g. '2026-06-19' in useCountdown hook
-- ---- ----	Date written out e.g. 19 June 2026
Your City	Your wedding city name
Venue Name	Your actual wedding venue name
Full Address	Full address for the Google Maps link
/couple.jpg	Your hero photo — copy to public/ folder
/couple2.jpg	Countdown background photo — copy to public/
/envelope.png	Your Canva envelope PNG — copy to public/
mapsUrl value	https://maps.google.com/?q=your+exact+venue

COPY YOUR PHOTOS — Terminal Commands

```
# Copy your hero photo:
cp ~/Downloads/your-photo.jpg ~/Desktop/wedding-invite/public/couple.jpg

# Copy your countdown photo:
cp ~/Downloads/second-photo.jpg ~/Desktop/wedding-invite/public/couple2.jpg

# Or just drag and drop files into the public/ folder using Finder!
```

HASHTAGS TO USE ON YOUR REEL:

#digitalweddinginvite #AIwedding #weddinginvite2026 #clauideal #freeweddinginvite #MakingAldolt

DM 'INVITE' for more free AI guides

Follow @MakingAldolt on Instagram

DO THIS IN TERMINAL FIRST:

```
cp ~/Downloads/your-song.mp3 ~/Desktop/claude/wedding-invitation/public/music.mp3
```

14 Add Background Music + Mute Button — App.jsx

Music starts after envelope opens. Mute button stays fixed on every slide:

```
import { useEffect, useRef, useState } from 'react'

// Add inside App component:
const audioRef = useRef(null)
const [isMuted, setIsMuted] = useState(false)
const [musicStarted, setMusicStarted] = useState(false)

// Start music when envelope closes:
useEffect(() => {
  if (inviteOpen && !musicStarted) {
    audioRef.current = new Audio('/music.mp3')
    audioRef.current.loop = true
    audioRef.current.volume = 0.3
    audioRef.current.play().catch(() => {})
    setMusicStarted(true)
  }
}, [inviteOpen])

// Stop music when tab closes:
useEffect(() => {
  return () => { if (audioRef.current) audioRef.current.pause() }
}, [])

// Toggle mute function:
const toggleMute = () => {
  if (audioRef.current) {
    audioRef.current.muted = !isMuted
    setIsMuted(!isMuted)
  }
}

// Add this button in your JSX return (fixed top-right):
<button onClick={toggleMute} style={{
  position:'fixed', top:'10px', right:'16px', zIndex:99999,
  width:'40px', height:'40px', borderRadius:'50%',
  background:'rgba(0,0,0,0.35)',
  backdropFilter:'blur(10px)',
  border:'1px solid rgba(255,255,255,0.25)',
  color:'white', fontSize:'18px', cursor:'pointer',
  display: inviteOpen ? 'flex' : 'none',
  alignItems:'center', justifyContent:'center'
}}>
  {isMuted ? '■' : '■'}
</button>
```

15 Fix Slow Image Loading — index.html + HeroSlide + CountdownSlide

Preloads images before page renders — instant loading on Vercel:

```
// In index.html inside <head> – add these 2 lines:
<link rel='preload' as='image' href='/couple.jpg' fetchpriority='high' />
<link rel='preload' as='image' href='/couple2.jpg' fetchpriority='high' />

// In HeroSlide.jsx AND CountdownSlide.jsx
// Find the background <img> tag and add these attributes:
<img
  src='/couple.jpg'
  loading='eager'
  fetchpriority='high'
  decoding='async'
```
